Minimize the spread of COVID-19 at work

CUREENT STATE

As COVID-19 continues to spread across the globe, organizations are navigating the ambiguous process of safely returning their employees to work onsite. Without widespread, immediate, or onsite testing, it's critical that organizations have methods to identify those who have tested positive and those who have been exposed to COVID-19 within their workplaces to ensure that infected individuals do not spread the virus to colleagues and their loved ones.

SOLUTION

Qualtrics Workforce Contact Tracing allows individuals who have been exposed to or tested positive for COVID-19 to complete a simple assessment. Once the assessment is completed, the employer will automatically receive notification of the infected/exposed individual, who they've been in contact with and where they've been onsite so they can take necessary measures to sanitize workspaces and isolate those who may have been exposed to coronavirus.

Additionally, organizations can choose to automatically direct instructions or next steps for the infected individual to stay home, seek medical care, or check in with the employer as symptoms progress/subside. Qualtrics also offers employers the ability to alert those exposed to the virus to follow specific safety protocols to avoid infecting others.

Minimize the spread of COVID-19 at work

Please think back over the last week of all the people you may have had close contact within the work place.

Type in the name, team, or department and select the individual that you may have been in close contact with.
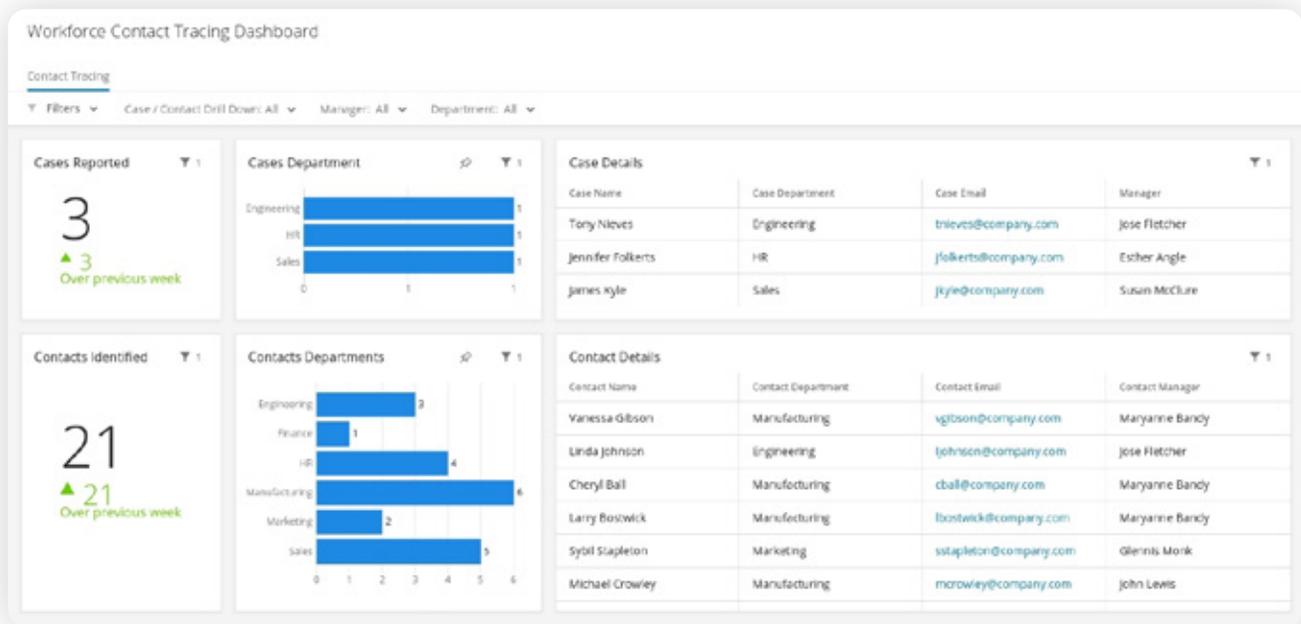

Do you have more contacts to submit?

YES

NO

The Benefits of Workforce Contact Tracing

+ Increase onsite employee safety by empowering employees to report COVID-19 infection, identify colleagues they've been in contact with, and indicate their workplace locations.

+ Intervene in real-time with automated case management, actions, and alerts that notify COVID-19 task forces so they can take steps to instruct those exposed to the virus with safety protocol and further sanitize workplaces.

+ Access dashboards showing trending data and insights that reveal hotspots of infection and exposure in various locations. Dashboards also show where certain teams, geographies, or locations are exhibiting high or low levels of positive cases and high exposure.

+ Increase employee confidence through a real-time system to report COVID-19 test results and potential exposure.
